

Other than color, there are a few things to consider when purchasing a bat. Hopefully you will find this basic information helpful.

Correct bat length:

when you extend the bat from the chest, the finger tips should be able to touch the end of the bat.

Correct bat weight:

A good test to see if you can handle a certain bat weight is to hold the bat in one hand, with your arm extended to your side for 30 seconds. If you can keep the bat extended without dropping it, you should be able to properly swing that weight.
