

MicroShield 360 is pleased to announce our new strategic alliance with FC Evolution. The purpose of the alliance is to provide added protection against microbes on surfaces and high-touch objects via MicroShield 360's disinfection and antimicrobial coating system. This strategic alliance will provide FC Evolution members an added layer of protection and peace of mind during these unprecedented times.

MicroShield 360 has been approved for use by the EPA in more than 1,000 different facility-types and over 1,500 surfaces. The coating is also FDA approved for direct food contact surfaces.

MicroShield 360 antimicrobial technology reduces the presence of bacteria, mold, and fungi. Antimicrobial substances offer a greater level of surface protection by continuously inhibiting the growth of microbes on surfaces for up to a year.

MicroShield 360 will be donating our antimicrobial application technology to treat players' and coaches' equipment - more details to follow. In addition to the applications, MicroShield 360 will be providing FC Evolution discounts on MicroShield 360's multiple products and applications. Details on these items will be released in the next couple of weeks.
